Momin Ejaz

Software Developer | Operational Systems & Workflow Automation

Alberta, Canada | Email | Portfolio | LinkedIn

PROFILE

Software developer building applications and automation for construction, manufacturing, and accounting workflows. Combines Python, React, and SQL development with practical project-controls knowledge. Designs systems that validate source data, manage exceptions, and preserve a clear trail from input to decision.

TECHNICAL SKILLS

- **Applications:** Python, TypeScript, JavaScript, React, FastAPI, Fastify, SQL, REST APIs.
- **Data & automation:** pandas, openpyxl, Excel/VBA, Power BI, DAX, Playwright, reconciliation, SAP upload preparation.
- **Delivery:** Azure App Service, Azure SQL, Microsoft Entra ID, GitHub Actions, testing, deployment preparation, user support.

PROFESSIONAL EXPERIENCE

Graham Construction Inc. | Software development and project-controls technology

Calgary / Edmonton, Alberta | October 2020-Present

- Built an equipment-verification portal that assigns reviews by project and yard, routes exceptions, and preserves sign-off history for reporting.
- Developed equipment-accounting and Daily Log applications with validated workbook imports, user permissions, source traceability, and SAP/Excel output workflows.
- Automated journal-entry preparation and reconciliation with Python, pandas, and openpyxl; produced mapping and exception reports for records needing review.
- Combined fleet workbooks and equipment readings into a utilization workflow with data-quality checks, documented overrides, and reviewable exceptions.
- Developed Power BI/DAX reports for hours, progress, and cost visibility; separately audited an SAP/InEight model for calculation and filter-behavior risks.
- Automated invoice and client-portal processing with Python and browser automation.

MeTech Consulting Inc. | Freelance Software Developer

Greater Calgary Metropolitan Area | May 2013-Present | Freelance

- Work with prospective clients to understand workflows, define software requirements, and prepare project scopes and proposals.
- Coordinate proposed solutions, schedules, and delivery requirements with the software team.

INDEPENDENT PROJECTS

QuietPage | Flutter / Dart | Android MVP

- Built an offline reading and listening app that imports web pages, EPUB, text, HTML, clipboard content, and DOCX documents.
- Added reading progress, bookmarks, speech and background media controls, and portable backup/restore; supported the work with parser and widget tests.

Lumber Training Portal | Next.js / SQLite | Local proof of concept

- Built administrator and learner workflows for courses, assignments, progress, feedback, and reporting.
- Added authenticated media access and local uploads; created a narrated demonstration for stakeholder review.

EARLIER EXPERIENCE

Pine Profiles Inc. | Systems Development & Automation

Creston / Vancouver, British Columbia | April 2018-October 2020

- Designed a FileMaker inventory system for purchasing, sales orders, and stock tracking, with barcode-based shipment entry.
- Built Arduino and servo-based trim controls for sawmill operations; developed costing tools and Power BI analysis to compare production costs with sales prices.

Quinn Contracting Inc. | Cost Coordinator

Chetwynd, British Columbia | July 2017-September 2017

- Supported cost reporting, rate validation, forecasts, and planning inputs; built automated data-entry tools and Power BI views for costs, manpower, and progress.

Husky Energy | Systems Developer

Calgary, Alberta | April 2015-August 2015

- Built VBA and Microsoft Access tools to track turnover records, punch items, checksheets, and system status, with QR-based record tracking.

Husky Energy | Development / Reservoir Engineering Co-op Intern

Calgary, Alberta | Summers 2013 and 2014

- Automated AccuMap-to-OFM data transfer with Python and configured OFM monitoring reports.
